

MEDIVision

CiC Patient Education Software

MEDIVision system is patient education software specifically designed for orthodontic practices. Integrated with OrthoTrac software, the system helps orthodontists communicate some of the more complex conditions, procedures and treatments to their patients, helping you gain treatment acceptance.

Animations in 3D

Patient Information Sheets

Before & After

Orthodontic Animations

Three Orthodontic Resources

Animations in 3D

- Select from a list of 34 topics.
- Animations last less than a minute, saving time in the operator.
- Conditions and procedures are shown very clearly, increasing patients' understanding and acceptance of treatment proposals.

Patient Information Sheets

- Select from 24 information sheets, covering most common topics.
- Edit and personalize all info sheets to print and give to your patients.
- Many info sheets contain animation images, reinforcing what the patient has heard in the operator.

Over 100 "Before & After" Photos

- Select from more than 100 photos in the library.
- Photos can be shown to patients and copied into other documents, such as practice brochures and treatment plans.

Orthodontic Animations

- New animations with emphasis on orthodontic conditions, treatments and procedures.
- Animations cover wide range of the most common conditions orthodontists deal with.

TwinBlock

Rapid Maxillary Expander

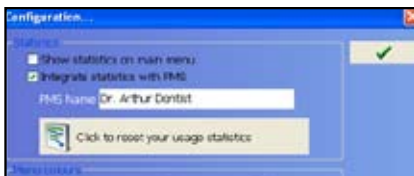

Canine in the Palate

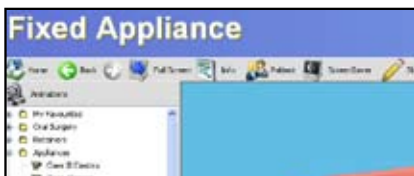

Opening a Lateral Space

Fixed Appliance

Easily Explain Conditions and Solutions

Trying to explain how a condition can be rectified can be difficult and time consuming. MEDiVision system offers the following tools to simplify the process.

Twin Block

Explaining how a Class II can be resolved by positioning a Twin Block can give a patient the confidence to persevere with the treatment.

Rapid Maxillary Expander

Showing how cross-bite can be corrected by changing the shape of the mouth is covered in just 45 seconds.

Canine in the Palate

MEDiVision system helps explain how a canine can be moved through the bone of the palate clearly and simply.

Opening a Lateral Space

This animation shows how a fixed appliance fitted with a spring can move the whole tooth including the root, in preparation for an implant or bridge.

Fixed Appliance

For younger patients, the aesthetic effect of having braces is a major concern. Being able to show how a fixed appliance works and how it can be made less obvious is important.

Functionality and Integration

Customization

The whole look and feel of the MEDiVision system can be customized, including screen colors, the text that accompanies the animations and the patient information sheets.

Screen-Saver Function

This new feature allows your chosen animations to play automatically, ideal when a patient is waiting for their anesthetic to take affect.

Navigation

You can use the main menu to move around the system or the familiar Windows explorer tree. Moving from animations, to leaflets and photographs is a simple click of the button.

Systems Integration

MEDiVision work closely with your OrthoTrac practice management system, so that information from our systems can transfer electronically into patient records.
