

Efficiency and guidance you can count on.

## Kodak WinOMS CS

Practice Management Software Add-on Modules

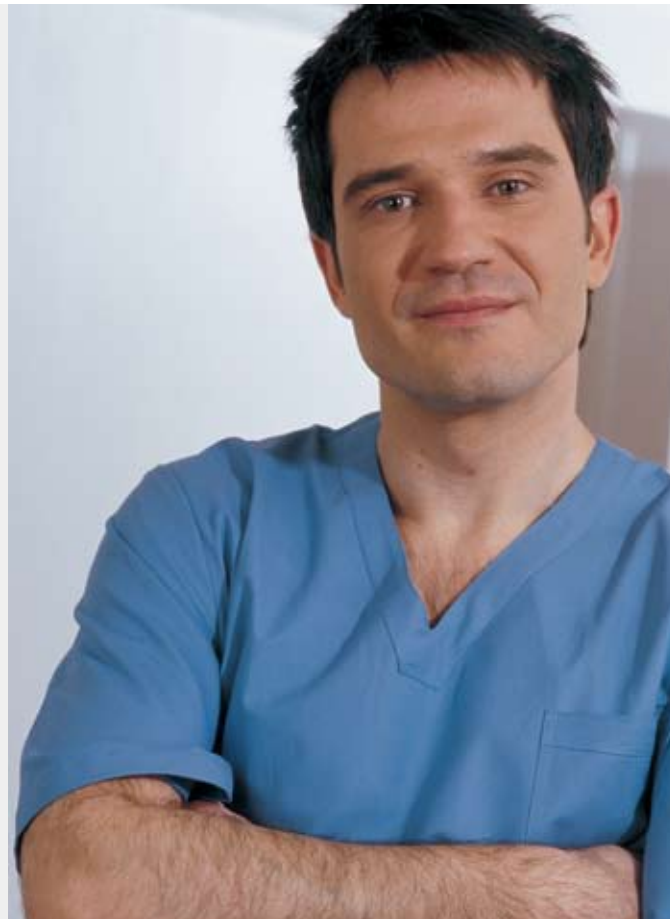

Improve the efficiency of your practice with add-on modules for your WinOMS CS software

Our solutions help you save time and reduce your practice's reliance on paper in your daily routine.

We offer several add-on modules to fit the specific needs of your practice. Each module is designed to help you achieve a paperless office, increase productivity and improve workflow.

Support you can count on.

Like WinOMS CS software, these integrated modules are fully supported by our efficient support team. Experienced help is available when you need it.

For more information call **1-800-331-4871**  
or visit **[www.kodakdental.com/go/winomscs](http://www.kodakdental.com/go/winomscs)**.

Take your practice management software to the next level and help create a paperless workplace with add-on modules for WinOMS CS software.

Digital Forms Module

**Digital Forms Module**

Transfer all of your existing forms and documentation to digital.

The digital forms module enables you to easily create secure digital documents and capture electronic signatures for your patient records.

**Create the digital forms you want – when you want.**

Utilize Microsoft Word 2003 software to create and manage your own customized forms to fit your specific needs.

**Make your paper forms electronic.**

From HIPAA compliance to consent forms, securely store all of your patient forms digitally within the patient file.

**Capture electronic signatures.**

With a tablet PC, capture both physician and patient signatures securely on the digital form.

**Create electronic op reports and case narratives.**

Utilize digital forms to create custom document templates, such as op reports, narratives, treatment letters and referral letters. You can easily create common fields used in clinical documents and consent forms. Completed documents are automatically attached to the patient record.

**Securely store digital documents within the patient record.**

Digital forms are attached directly to the patient record within WinOMS CS software, allowing for streamlined office flow and centralized patient information.

TRUFORM Software Integration Module

**TRUFORM Software Integration Module**

Save paper and time at check-in with PBHS TruForm software integration.

Now patient registration data can flow directly from your web site into WinOMS CS software, eliminating those patient data forms on the first visit. Data is verified by your front desk, then edited, accepted and converted into a new patient account – saving valuable time and enhancing the patient experience.

**Download patient medical history data.**

You can also review and edit posted medical history data and then automatically apply the changes to your database – eliminating data re-entry.

**Download and attach PDF forms to the patient's chart.**

Automatically attach the original PDF form to the patient's chart along with the patient's signature, which is captured at check-in.

**Automatic check for duplicate patients.**

If an electronically pre-registered patient already exists in your software (as a patient or a walk-in), WinOMS CS software finds the patient and prevents a duplicate record from being created in your database.

QUICKBOOKS Software Integration Module

**QUICKBOOKS Software Integration Module\***

Save time with Intuit QuickBooks software integration.

Now you can enjoy secure data transfer to QuickBooks software, saving staff valuable time. No longer will you need to manually post daily deposits and refund information into QuickBooks software – this module will automatically update information with a few clicks of the mouse.

**Secure data sharing.**

Securely transfer data from WinOMS CS software to QuickBooks software while protecting financial information from unauthorized users.

**Automate daily activities.**

Automatically post your daily deposits and refund check information into QuickBooks software. You can separate or combine cash, checks and credit card deposits as you choose. Refunds are automatically populated in your QuickBooks check printing queue.

**Streamline workflow and reduce errors.**

The pre-check report lists all patient refunds before they're sent to QuickBooks software, allowing you to verify accuracy and reduce the potential for errors before posting.

\* Uses the latest versions of QuickBooks software. Supports Intuit QuickBooks software 2004, 2005, 2006 and 2007 (Standard, Professional, and Enterprise). Version support subject to change with new releases from Intuit.

Anesthesia Records Module

**Anesthesia Records Module**

Document your anesthesia records electronically and securely.

The anesthesia records module enables you to create secure electronic anesthesia records and attach them directly to the patient file. No more thermal paper and file storage requirements.

**Intuitive interface.**

Store all of your information directly within the patient chart. Pre-op, vital signs and post-op evaluation information are quickly and intuitively entered into the chart. During procedures, information such as medication administered, dosage levels and graphical charting of your patient's vital signs are easily entered into the patient record.

**Track patient vitals electronically.**

Patient vitals can now be entered and stored directly within the patient chart. This information can be entered during procedures with the simple click of a mouse or transcribed from monitor printouts after a procedure has been completed. Also, ask us about our compatibility with Criticare Systems monitors for more streamlined data tracking.

**Keep a permanent record.**

Unlike thermal paper and pen and paper graphs, the electronic anesthesia record will not degrade over time and does not require a paper file.
